OUR CONCEPT FOR COLD DAYS

Creating first-rate clothing for the autumn and winter seasons is one of the most challenging and interesting tasks that our product development team does. Cycling in the cold, wet and wind demands highly functional clothing that isolates the body, keeps it dry at all times and adapts to constantly changing weather conditions.

Our brand-new, structured softshell material satisfies these requirements perfectly! The material's roughened inner surface helps to insulate the body's warmth better and regulate the temperature accordingly. This ensures a pleasant feeling when being worn as well as dry skin when there is drizzle in autumn or ice-cold wind blowing against the wearer in winter.

With the current collection, we have paid particular attention to the concept behind our target-market-specific product range. For instance, we have expanded each segment to add functional products such as breathable fleece jerseys, redesigned PrimaLoft jackets and vests; and smart half-zip hoodies for winter. Whether training, commuting or on the local trail, we ensure worry-free protection in every area so that our customers can concentrate on the things that matter.

In addition to having many technical updates, the new collection also amazes with a sophisticated, subtle colour scheme that adapts emotionally to the colder time of the year. Our jerseys, jackets and trousers come with clean, natural colour tones and stylish designs, making cycling an absolute must for this winter!

Sascha Bleher,
Head of Sales

GONSO. BECAUSE THERE'S A STORY BEHIND EVERY SUCCESS.

In 1926, Johannes Gonser started a sewing workshop in Onstmettingen, a neighbourhood in Germany's mountainous Swabian Jura region, and gradually expanded it into a textile factory over time. When his eager grandson, Hans Gonser, took over the business, the latter came up with a new name for the company straight away: GONSO, a portmanteau of their surname and the company's location at the time.

In the 1960s, Hans Gonser dared to explore new fields of business and experimented with sports textiles.

Starting in the early 1980s, Hans Gonser came to focus on cycling textiles and revolutionised this market. He was a pioneer in working with the new, innovative 'Dunova' yarn material developed by Bayer. The use of this ultra-functional yarn was considered groundbreaking for the jersey and cycling legwear sector, as these products were usually made of wool and cotton in those days. Experimenting with advanced functional fibres gave the brand a major boost in its innovation and a knowledge advantage over its competitors. The innovative materials impressed consumers with their functionality and demand rose. GONSO expanded its cycling range determinedly and steadily enriched the market with further developments.

It set another groundbreaking milestone with the first cycling legwear to include built-in padding. This feature arose from the dissatisfaction experienced by the company's ingenious owner. Hans Gonser was a passionate cyclist, you see, and needed to complete training sessions on an exercise bike because of his severe osteoarthritis - which quickly became very painful. After just a short period of time, he was struggling with the same wounds that professional cyclists had to cope with back then.

Without hesitating, he put out a call within his company and gave his employees the challenging task of developing cycling legwear with built-in padding. The first sample of padded legwear was created a short while later and solved the problem.

Not long after that, the padding also came to be made from synthetic materials, which put the finishing touch on the functionality. With this development, Hans Gonser left an influence on the entire cycling legwear market that still remains today. He is considered the inventor of cycling legwear with synthetic padding.

**GONSO.
BECAUSE
EVERYONE
IS DIFFERENT.**

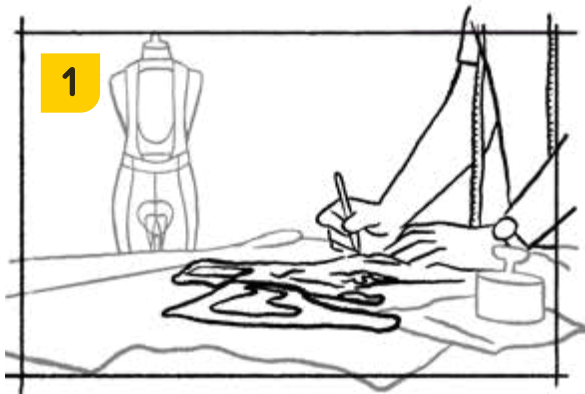

No body is like the other. We develop an individual cut for every size. Thanks to these gradations, you can choose the perfect legwear for you from over 50 different sizes.

GONSO. BECAUSE WE KEEP TINKERING UNTIL EVERYTHING FITS PERFECTLY.

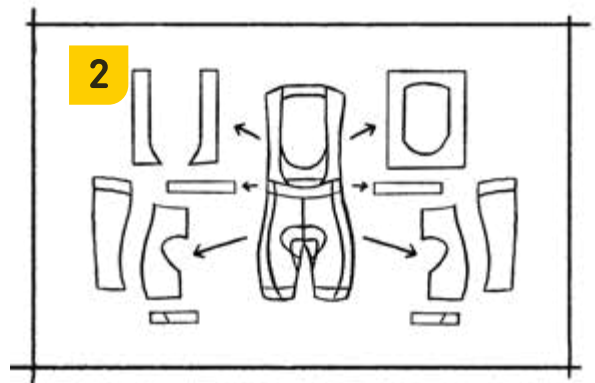

We at GONSO believe that a cycling legwear product is only finished when all sizes fit perfectly – even if the journey there is longer and harder. We see every piece of feedback as inspiration.

We test, revise and redevelop. Every idea inspires us to become even better so that every GONSO legwear product you buy is the best.

DESIGN

It all begins with the product idea. The materials and components are chosen and an initial sketch is drawn up.

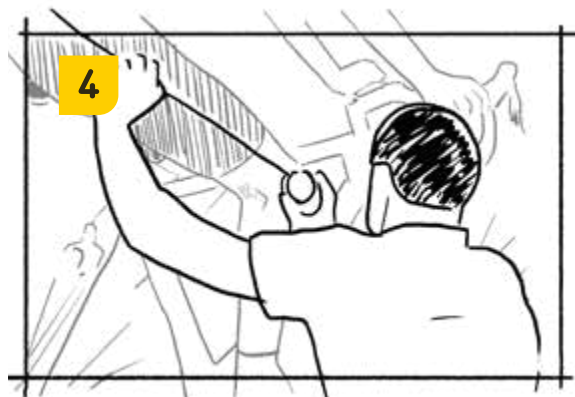

CUT

To achieve the optimal fit, each legwear model is first broken down into complementary, individual parts.

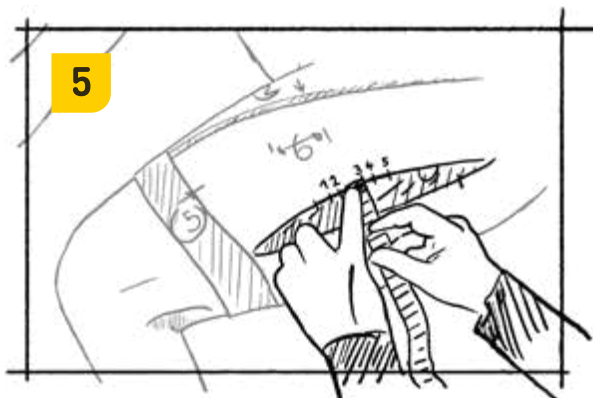

PROTOTYPING

The individual elements are used to create an initial prototype. The cut and fit are optimised based on this prototype.

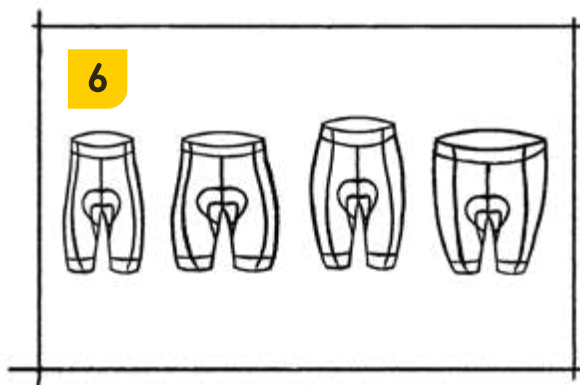

FITTING

We adapt the prototype to real people instead of tailor's dummies, so we can be more specific in considering body shapes and the way they change when moving.

ADJUSTMENTS

Corrections on a millimetre scale provide us with exact values that we can transfer to the final cut of this legwear model. This process is often repeated multiple times until the prototype fits perfectly.

SIZE GRADATIONS

The base size is scaled up and down to create different sizes in line with the product and body area. The non-linear scaling of the size increments creates products that fit in every size. After this, the production process begins.

**GONSO.
BECAUSE WE VALUE
NATURE ...**

**... ALL OF OUR PRODUCTS
ARE PFC-FREE.**

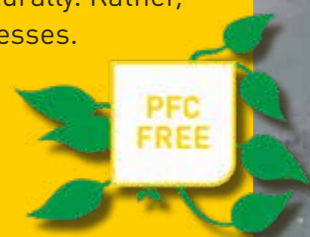

As a brand that is active in PFC-free finishes for functional cycling wear, we have successfully removed environmentally hazardous perfluorinated and polyfluorinated compounds from our clothing entirely. This helps us to make our contribution to the preservation of the environment.

What are PFCs?

Perfluorinated and polyfluorinated compounds (PFCs) are used in many products in the outdoor clothing industry. They make the textiles breathable and resistant to water and dirt. PFCs do not occur naturally. Rather, they are created through chemical processes. They are regarded as harmful to people's health and the environment.

What is our alternative?

Impregnations that contain PFCs are still widely used because one of their outstanding attributes is that they repel water and other forms of dirt. In close cooperation with partners in the chemical textile industry, we have found a solution that makes water drip off textiles very nicely and comparably to the performance of impregnations that contain PFCs.

GONSO. BECAUSE WE VALUE NATURE.

REPAIR SERVICE

Our in-house repair service is a deliberate element of our sustainability concept. The well-trained specialists in the sewing hall can repair nearly any damaged or defective GONSO product, which extends the clothing's life time noticeably.

FSC-CERTIFIED AND RECYCLED

We are consistent in putting our sustainability spirit into practice – down to the packaging and hang tags. The polybags that we use are made of recycled materials. All hang tags that are used are FSC-certified. The FSC (Forest Stewardship Council) is a global, non-profit organisation that sets high standards for responsible, environmentally friendly and socially fair forest management.

PRIMALOFT SILVER INSULATION 100% PCR

PrimaLoft® uses recycled PET bottles to produce PrimaLoft® Silver Insulation 100% PCR and offers one of the best-performing, environmentally friendly insulations available in the market. Our PrimaLoft products are made 100% of this sustainable variety.

MADE IN DIRECTLY OWNED PRODUCTION FACILITIES

Our clothing is manufactured mainly in Turkey and China. The production company in Turkey, which currently makes approx. 60% of all pieces, is a wholly owned subsidiary and was established in 1989. In China, we work with two joint ventures that, in the cycling segment, only manufacture GONSO products. Thanks to this close partnership, we not only can adhere to quality standards, but also take social aspects seriously.

FAIR WEAR FOUNDATION

The concept of sustainability is firmly entrenched in our thoughts and actions. For this reason, we are a member of the Fair Wear Foundation, which advocates for better social standards. This includes a goal of improving working conditions in clothing manufacturing and promoting joint social responsibility. Companies that join the FWF make a commitment to implement and monitor social standards – the basis for dignified working conditions – within their production companies. The social standards' requirements are based on the core labour standards of the ILO (International Labour Organization).

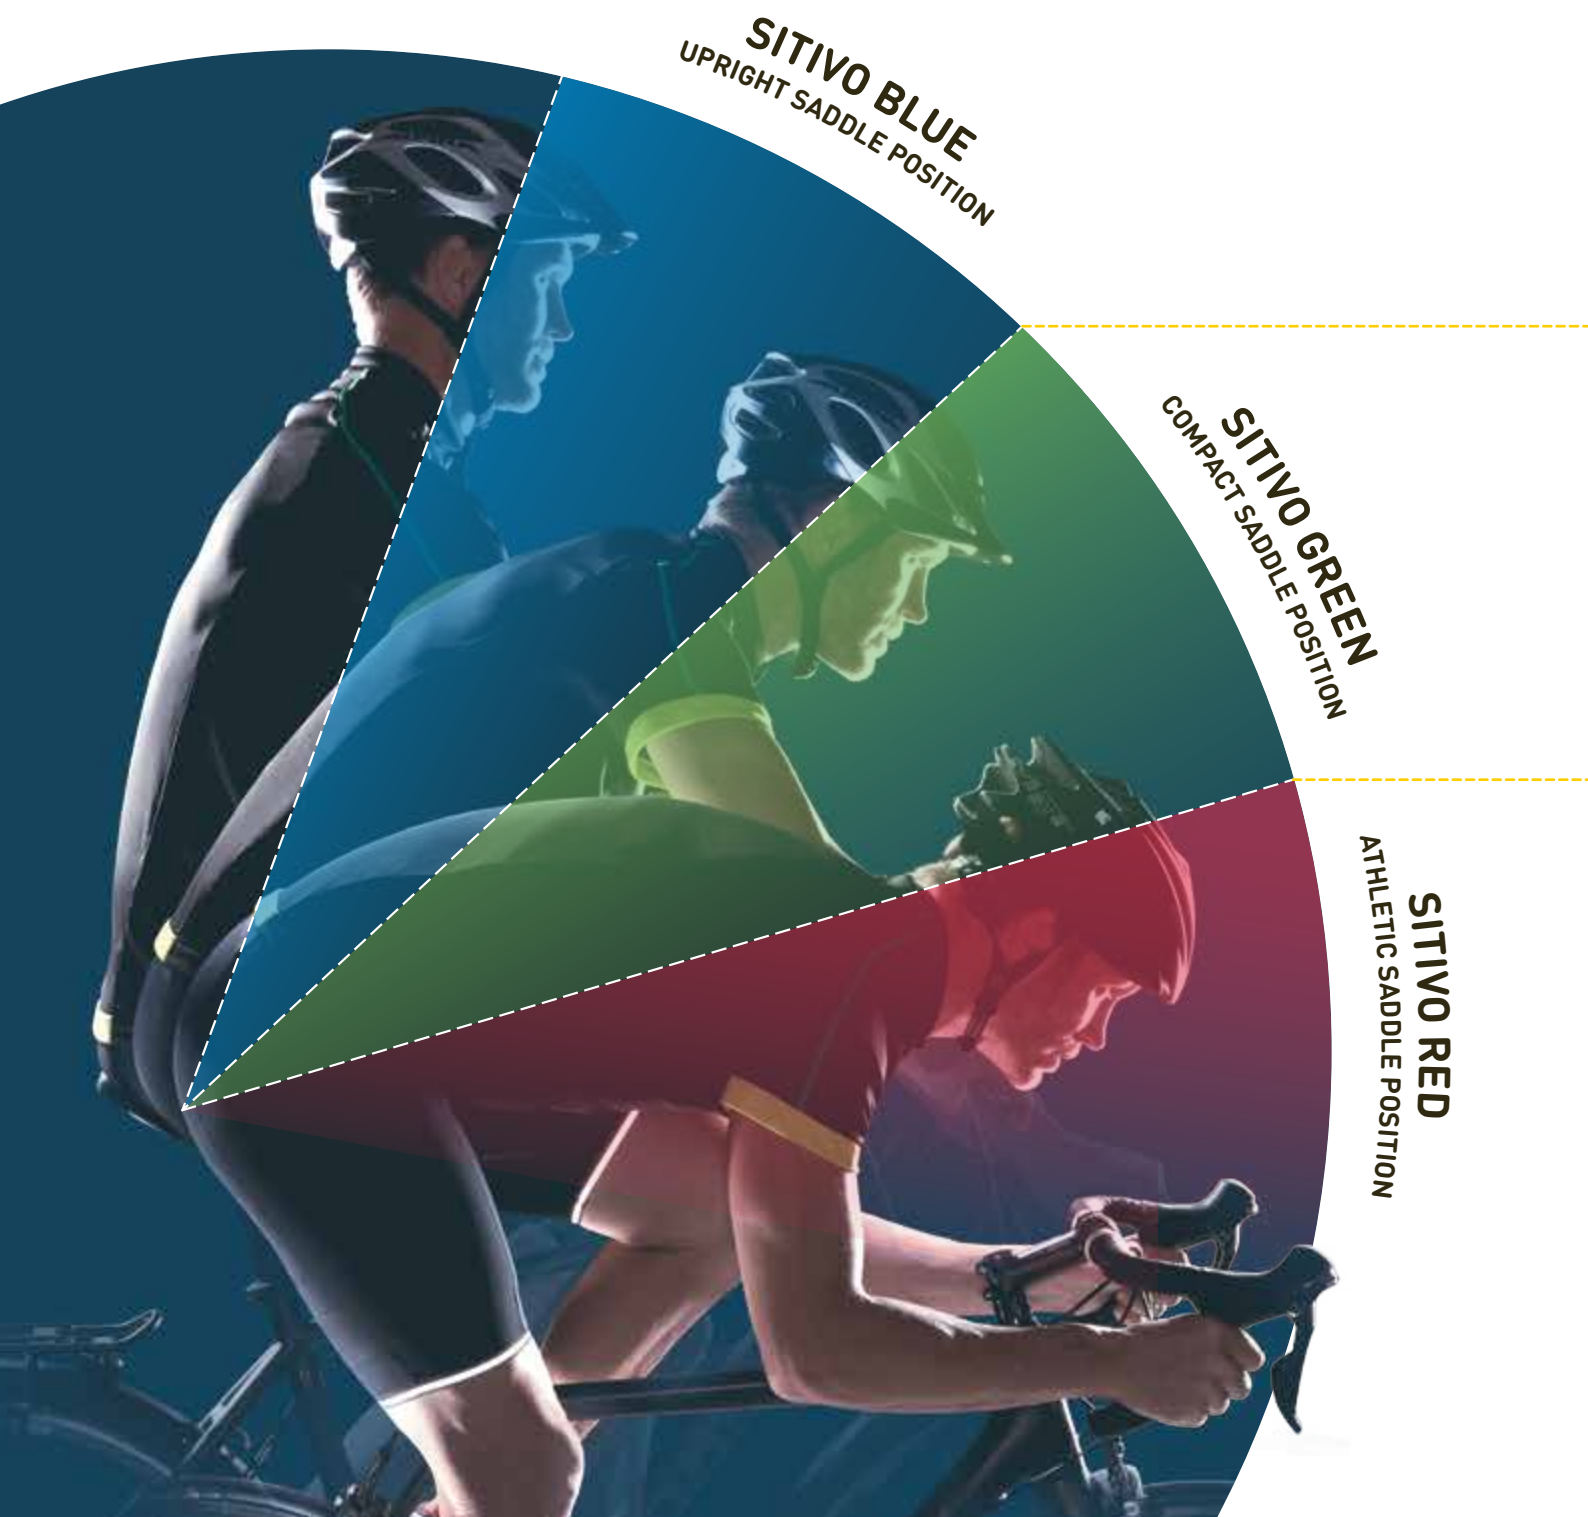

More information at: www.fairwear.org

RECYCLED POLYAMIDE YARN FROM WASTE PRODUCTS

To make this yarn, polyamide waste such as fishing nets, leftover fabric, carpet and industrial plastics from landfill and oceans is collected and, in the next step, restored to a form close to how it originally was through regeneration and cleaning processes. The newly generated polyamide is then processed into textile yarn and makes its way back into industry, where it can be used again. The yarn's functionality and quality do not differ from polyamide yarns made the traditional way. This yarn is used in some of our cycling legwear products which are marked with a corresponding symbol.

THE PRESSURE POINTS:

THE PERFECT CYCLING SHORTS FOR ANY OCCASION.

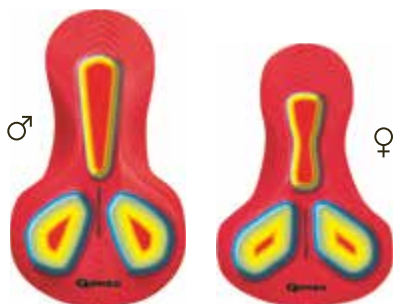

PURE CYCLING THRILL IN EVERY SITTING POSITION.

**The SITIVO cycling shorts concept:
1 pair of cycling shorts. 3 variants.
The perfect sit.**

A burning backside, aching bones – it is something that many cyclists struggle with. GONSO has analysed this everyday cycling problem in detail and, as an answer, developed the SITIVO cycling shorts (with the name coming from the words SITS and INNOVATION).

The basic idea behind the new SITIVO cycling shorts was to make the perfect cycling shorts for any occasion. It quickly became clear that padding in particular must have a central role in them, along with the perfect cut and material. For this reason, we have tested different padding characteristics in multiple stages of development repeatedly and extensively, and optimised them further. By the end, we were certain about something: to improve people’s enjoyment of cycling, they need different paddings at the various pressure points that are created through the ergonomic distribution of mass and torso’s position (upright, compact or athletic).

The outcome of our pressure point analyses and further tests is the SITIVO cycling shorts for women or men, with a cut that was specially developed by our lead pattern maker and features specifically selected materials. What sets them apart is the six paddings (3 for men and 3 for women) with different foam levels, different volumes and the use of Poron® as a shock-absorbing material in specific parts.

As a result, the SITIVO cycling shorts are the optimal response to people’s individual requirements for enjoying cycling and the pressure points that every cyclist experiences.

GONSO MEETS SQLab

Expertise in cycling legwear meets ergonomics experts

GONSO first cooperated with the company SQLab, the award-winning ergonomics experts from Bavaria, for the 2020 spring/summer collection.

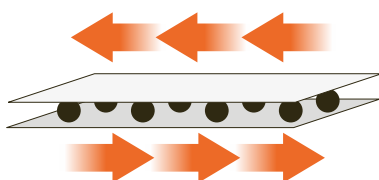

SQLab has made it its mission to apply the highest health standards to the design of saddles, steering elements, padding and soles as well as any bicycle part that influences a cyclist's proper position on their bike. To accomplish this, SQLab works with medical experts when developing its products. SQLab products have performed highly successfully in multiple tests as a result.

As part of the brands' cooperation, the **SQLab-Pad M** and **SQLab-Pad W** padding products have been integrated into four newly developed cycling legwear models for women and men. The legwear's development – from the design

through to the pattern marking and extensive testing – took place exclusively at GONSO's head office in Köngen, Germany.

The result of these efforts is a product line that can meet the heavy physical demands that come with cycling.

This season, the **GONSO meets SQLab** line already offers seven models for women and men. The popular cycling shorts are now available in four colours, enabling even more individual outfits for bicycle riding.

Minimisation of shear forces

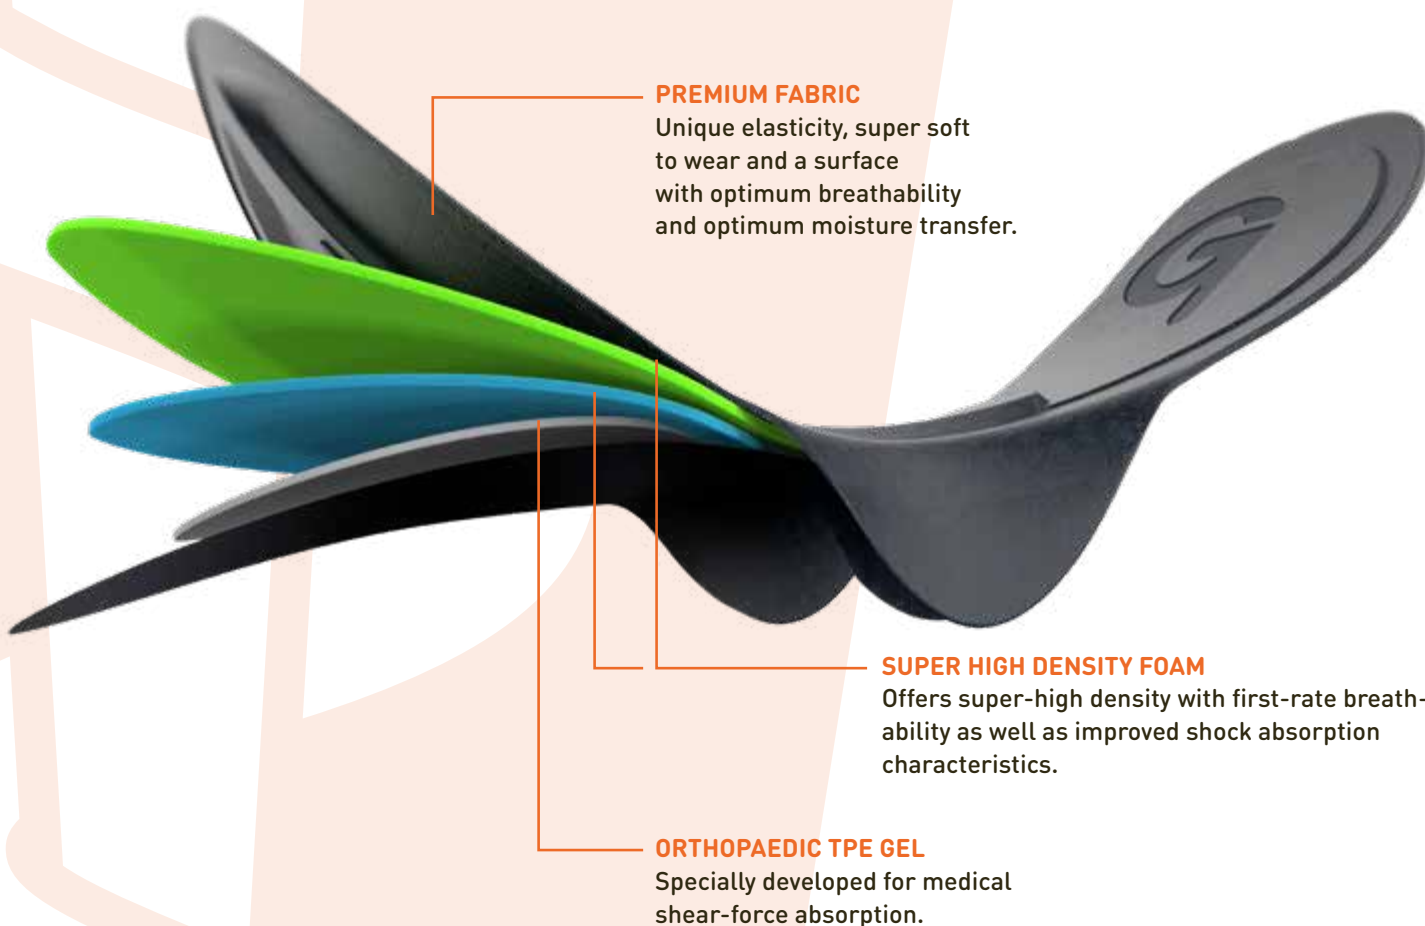

Pain starts at the periosteum, a layer of tissue enveloping the bone, although it is not so much the pressure that is the problem but rather the shear forces that are created by pedalling. The pelvis' light yet constant movement on the saddle results in painful shear forces against the periosteum. The SQLab-Pad M and SQLab-Pad W feature a thin layer of orthopaedic TPE gel. This gel was specially developed for medical shear-force absorption.

Firm legwear padding

Why has firm legwear padding not been around for longer?

Because high-quality foams with better shock absorption characteristics are denser, which means they lose breathability. Using a patented method, SQLab has managed to break open the structures of very dense foam. The outcome is high breathability comparable to traditional padding while maintaining full, perfect shock absorption.

PREMIUM FABRIC

Unique elasticity, super soft to wear and a surface with optimum breathability and optimum moisture transfer.

SUPER HIGH DENSITY FOAM

Offers super-high density with first-rate breathability as well as improved shock absorption characteristics.

ORTHOPAEDIC TPE GEL

Specially developed for medical shear-force absorption.

SQLab-Pad M and SQLab-Pad W

The SQLab-Pad M and SQLab-Pad W padding products are no more than 6 mm or 8 mm thick respectively, and feel exceptionally firm. This padding maintains its shape over medium and long distances. It consists of a dense and simultaneously breathable foam that comes with a thin layer of a TPE gel on the bottom. This makes the padding an ergonomic alternative to our existing padding portfolio.

OUR TARGET MARKETS

MOUNTAIN BIKING

For our mountain bikers, riding isn't about gaining the maximum elevation or the most technical routes. They prefer to challenge themselves on extended tours (potentially on the trail) with friends or family. Be it on an e-bike or classic mountain bike, they value the freedom, the time spent in nature and the fun that an end-of-day ride on the local trails provides for them.

BICYCLE TOURING

Our bicycle touring customers are as varied as the world of cycling itself is. Whether on a touring bike or gravel bike, it's about the freedom that cycling offers them. They value our simple and sophisticated looks that accompany them on their bike-packing adventures, whether big or small.

CORE COLLECTION

Since our legwear is the focus of what we do, the Core Collection acts as the centrepiece of our wider collections. Thanks to the perfect fits, use of high-quality materials and appropriate padding for any route, every one of your customers can find the right legwear for them with us. The Core Collection stands at the heart of our collections, and it is topped off with our classic cycling jackets and cycling jerseys.

RACING

There's one thing that all our racing cyclists agree on: words cannot describe the feeling they get when their wheels are speeding across the asphalt and the world is flying past them. Having the perfect cycling clothing is essential to enjoy this feeling kilometre after kilometre. It cannot be pinching, slipping or irritating, even on longer routes. Everything needs to be just right.

MEN'S CYCLING LEGWEAR

THE PERFECT CYCLING LEGWEAR FOR ANY OCCASION.

GONSO.

BECAUSE WE'RE SYSTEMATIC ABOUT OUR EXPERTISE IN MATERIALS.

RECYCLED POLY-AMIDE YARN

New nylon yarn regenerated from waste

- Collection of waste such as fishing nets in oceans
- Regeneration and cleaning process to obtain pure nylon
- Reprocessing into textile yarn
- Recyclable

G-SHELL

Optimal thermal insulation thanks to breathable membrane

- 100% windproof
- Water-repellent
- Rapid perspiration transfer
- Perfect temperature regulation

G-TEX

Uncompromising weather protection

- Water column 10,000 mm
- 100% waterproof
- 100% windproof
- Taped seams

PRIMALOFT®

- Windproof, water-repellent, breathable
- Lightweight and compressible
- Technical, eco-friendly microfibre that imitates the function of down
- High thermal efficiency, even when wet
- Made from 100% recycled plastic bottles

LYCRA® SPORT

- Elastane fibre
- Ultra-lightweight and near-invisible
- Better comfort thanks to optimal fit and longevity

SILVERPLUS®

- Skin-friendly
- Eco-friendly technology for preventing odours
- Stops odour-causing bacteria from multiplying

DRY II

Special functional outer fabric that is ideal for making cycling legwear for when the seasons are changing, thanks to its quick-drying characteristics.

- High moisture transfer
- Dry feeling on skin, stops it getting cold effectively
- Vertically and horizontally elastic material moves with all motion
- Opaque and shape-retaining material

POLYESTER

Synthetic chemical fibre. Optimal for making functional clothing for active athletes.

- Fast-drying
- Transfers moisture
- Maintains shape and colour
- Non-tear, abrasion-resistant and long-lasting
- Soft, pleasant comfort when worn
- Very lightweight and fine
- Optimal lining with very high thermal insulation

POLYAMIDE

Synthetic chemical fibre, also known as nylon. Ideal for making functional underwear, cycling legwear and rainwear.

- Transfers moisture away from the body
- Durable and non-tear
- Maintains shape while offering elasticity
- Does not shrink when washed

ELASTANE

Synthetic textile fibres. Clothing items that contain elastane stand out for their amazing elasticity, both lengthways and crosswise; allow an excellent range of motion and offer the perfect fit.

- Maintains shape and is robust
- Very easy-care and low on creases
- Fine yet does not tear
- A compression effect can be achieved through a special processing method
